Electron Beam Processes update concerning COVID-19

We have identified areas critical to enable us to operate and have developed operational continuity plans to ensure we have resources to keep our business running safely and minimize the impact on our production. We are following all government recommendations for safe working.

Employees who are critical to maintaining operations have been assigned to rotating teams who will be on site during alternating shift patterns. Staff continue to work at home where possible. We expect this pattern of working to continue until government advice changes.

Our team will continue to monitor and guide all measures which should be taken during this event and take actions necessary to ensure our operations continue running as smoothly as possible.

Now travel restrictions have been relaxed we have revised our visitor police as detailed below;

Visits to be kept to a minimum, essential business only

All visits to be pre-booked times and dates to avoid visitor clash

EBP person arranging the visit shall be the responsible host

All visitors to use hand sanitiser and wear face mask or face shield on site

Visitor host to be responsible for Covid-19 procedures and disposal of masks or cleaning of shields

We continue to do everything we can to ensure the provision of our ongoing service and support for our staff and customers
